

Household finances: the declining trend in real incomes remains entrenched, weakening economic growth

Wednesday 17 January 2024

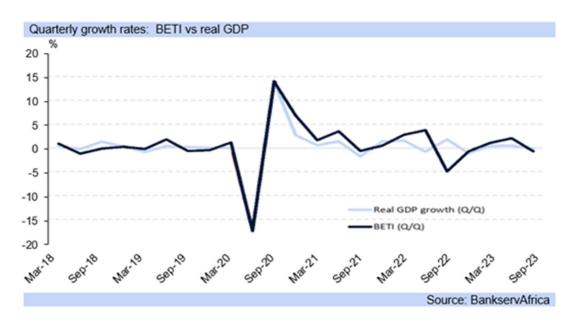

Household Consumption Expenditure	2022	2023	2024	2025	2026	2027	2028
HCE, total (real, %)	2.5	0.6	1.4	1.8	1.8	2.1	2.2
HCE as % of GDP	66.7	66.7	67.1	67.3	67.4	67.5	67.6
Unemployment rate (%)	33.5	32.4	32.5	32.5	32.5	32.4	32.2
Population (million)	59.9	60.4	61.0	61.7	62.3	62.9	63.5
Employment growth rate (%)	5.9	5.2	1.2	1.6	1.5	1.8	1.9
Compensation of employees (%)	4.6	4.9	5.0	5.6	5.9	6.2	6.4
GCE as % of GDP	19.6	19.8	19.0	18.7	18.4	18.3	18.1

- Average salary increases slowed in October, to 1.8% y/y from 4.1% y/y in September (nominal, actual terms), below the inflation rate. In real (inflation adjusted) terms October saw a -3.4% y/y drop in real take home pay (BankservAfrica data).
- The average real salary fell to R13 942 a month in October, from R14 226 (revised) in September, still on a declining trend from R16 124 in February 2021, weakening HCE (Household Consumption Expenditure) growth and so GDP growth.
- CPI inflation rose in October, to 5.9% y/y, from 5.4% y/y in September and 4.8% y/y in August, cutting into real incomes (and so real expenditure) as nominal take home pay increases did not rise by the same amount.
- That is, average salaries in nominal (actual terms) rose by only 4.1% y/y in September, below the 5.2% y/y inflation rate, and so dropped by -0.8% y/y in real terms in September, and fell by -3.4% y/y in October in real terms.
- The BankservAfrica calculates average take-home pay "by dividing the total value of salaries paid into the bank accounts of (around 4 million) employees (excluding salaries greater than R100K per month) by the total number of salary payments".

- The Q4.23 BER Retail Survey shows that "durable goods and non-durable goods retailers in fact reported lower sales volumes compared to the previous festive season", indicating consumer financial strain in a higher interest rate environment.
- In December 2022, the prime lending rate was at 10.50%, while in December 2023 it had risen to 11.75%, a relentless upwards momentum from 7.25% in December 2021, and 7.0% in December 2020.
- High inflationary pressures in SA have come from the supply side, mainly fuel and food costs, and South Africa's CPI inflation rate has been uneven in its descent, but the trend is still one overall of falling inflation (i.e. disinflation).
- Indeed, higher operating costs for businesses, including self-generation of electricity in the case of load shedding, have weighed on businesses. BankservAfrica Economic Transactions Index (BETI) showed a contraction of -2.3% q/q in Q4.23.

 $\overline{}$

- The BankservAfrica Economic Transactions Index (BETI) measures the value of transactions in the economy (at seasonally adjusted real prices), and is seen as a good proxy of economic activity. We forecast that the economy stalled in Q4.23.
- Also out for Q4.23, the ABSA Purchasing Manager Index rose to 48.2 from 47.8 in Q3.23, although both indicate contractions in the industry having a negative effect on GDP, although Q4.23 less so than Q3.23.
- While a technical recession is possible for Q4.23 (two or more quarters of a contraction in GDP), any contraction, if it occurs, should be less than Q3.23's -0.2% qqsa (quarter on quarter, seasonally adjusted), and so closer to 0% qqsa.
- The Q4.23 BER Retail Survey showed a depressed reading, of 47%, indicating that 53% of retailers were dissatisfied with prevailing business conditions, although confidence became less depressed than in both Q2.23 and Q3.23.
- The BER notes, "(t)he uptick in retailer confidence appears to be driven by improvements in profitability and general business conditions, rather than better sales growth."
- For the first two months of Q4.23 (further data is not available), retail sales contacted by -4.3% sa (seasonally adjusted), in real terms, which is a hefty contraction and would require a very high outcome for December to avoid a Q4.23 overall contraction.
- The Bloomberg consensus (published this week) shows an expectation of an expansion of 0.6% y/y for 2023's GDP, but this is likely too strong, and a 0.5% y/y outcome is likely only with a 0% qqsa Q4.23 outcome, or less.
- Bloomberg also shows the consensus forecast for 2024's economic growth forecast is 1.2% y/y, close to our view of 1.0% y/y. Lower interest rates will assist the

economy this year, with improvements in infrastructure also expected (see Investec's 3rd January's Marco economic outlook, contact below).

• We continue to expect that SA's interest rates will remain on hold in Q1.24 and be likely cut in H2.24, with currently only a relatively small possibility of the first cut occurring in Q2.24 (May) instead.
