## Glossary Summary

**Annualised return:** Annualised return is the average return per year over the period.

**The Effective Annual Cost ("EAC"):** Boutique Collective Investments adopted the ASISA Standard on Effective Annual Cost ("EAC") for a period of 3 years up until the most recent TER reporting period. The EAC measure allows you to compare charges on your investments as well as their impact on your investment returns prior to investing. For further information regarding the ASISA Standard on Effective Annual Cost and access to the EAC calculator please visit our website at [www.bcis.co.za](http://www.bcis.co.za)

**Method of calculation:** Unit prices are calculated on a net asset value basis by determining the total market value of all assets in the portfolio, including any income accruals, less any permissible deductions.

The following costs may be deducted from the portfolio: brokerage fees, security services tax, audit or's fees, bank charges, trustee and custodian fees and the annual management fees of the manager.

**NAV:** The Net Asset Value (NAV) represents the value of the assets of a fund less its liabilities.

**Total expense ratio (TER):** The current TER cannot be regarded as an indication of future TER's. The TER and Transaction Costs cannot be determined accurately because of the short life span of the Fund. Includes the annual management fee, performance fee and administrative costs but excludes portfolio transaction costs (except in the case of an entry or exit charge paid by a fund when buying or selling units in another fund) expressed as a percentage of the average daily value of the Fund calculated over a rolling three years (or since inception where applicable) and annualised to the most recently completed quarter.

**Transaction cost (TC):** Transaction costs are a necessary cost in administering the Fund and impacts returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of financial product, the investment decisions of the investment manager and the TER Calculations are based on actual data where possible and best estimates where actual data is not available.

**Total investment charge (TIC):** This is the sum of the TER and TC.
